I'm a specialist in React ecosystem. However, working with this framework isn't essential - I'm more interested in expanding my knowledge of concepts and patterns than being tied to specific tools. I'm currently learning how to write easily testable apps with clearly separated layers (communication, business logic, view). It is my belief that is the underrated element in the art of front-end development, especially in large apps.

Experience

Team Leader *9bits*   06/2022 - 06/2024
